

The EyeNet Difference

- EyeNet's Automatic License Plate Recognition Software (ALPR) can read license plates using **COLOR**, black and white or **infra-red** video input. It is *compatible with most cameras*.
- Can use existing cameras including in-car video and laptop. Cost Advantage - Up to 75% lower cost.
- Software Platform interchangeable with different cameras.
- Access Programmable per plate number. Allow access by day, hour and virtually any combination. Example: Contractor allowed access Monday through Friday from 7:00 am to 4:00 pm.
- Powerful character recognition software can read shipping container numbers with documented 98% accuracy.
- Ability to match plate number to trailer number, container number and drivers' license number for security and asset management.
- First in the US to run plates to all state, local and federal law enforcement databases **LIVE** over a wireless network.
